

Implementation

Provide documented code for a working implementation of the part of the game that meets the remit, requirements and concrete architecture for Assessment 1. Code can be submitted in the zipfile, or via a link to a repository with a verifiable date before the hand-in deadline. An executable JAR of the game, that includes all external dependencies, must also be included in the zipfile. (20 marks)

<https://github.com/boatcorporation/boatgame>

State explicitly any of the features required for Assessment 1 that are not (fully) implemented, using your requirements referencing for identification, and consistent naming of constructs to provide traceability. Provide precise URLs to any relevant web pages. (5 marks, ≤ 1 *pages*)

Not applicable, all of the required features are implemented in our product.
